SUMMARY

Final-year **B.Tech in Computer Science & Engineering (Software Engineering)** student at Jain University (GPA **9.3/10**, expected May 2027) seeking Software Engineer roles. Hands-on full-stack (MERN) development experience, **200+** solved DSA problems, and a track record leading student teams on nationally shortlisted technology projects. Proficient in Python, C++, JavaScript, TypeScript, **Django**, and modern web frameworks.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, TypeScript, SQL

Web & Frameworks: React, Node.js, Express.js, Next.js, Tailwind CSS, HTML/CSS

Databases & Cloud: MongoDB, Mongoose

Data & Tools: Recharts, Git/GitHub, Linux

PROJECTS

IronLog — Fitness Tracking Web App — Developer — ironlog-dusky.vercel.app

- Engineered an automated Personal Record (PR) detection engine that computes **4** distinct record types (heaviest weight, best-set volume, estimated 1-rep max via the Brzycki formula, and rep-range PRs) in real time on every workout logged, edited, or deleted.
- Designed a **5-tier** strength classification system (Beginner to Elite) that fuzzy-matches a user's Bench/Squat/Deadlift history and benchmarks it against bodyweight-ratio strength standards.
- Built **MongoDB** aggregation pipelines to compute lifetime workout totals, set/rep counts, and cumulative training tonnage across a user's full history, visualized with **Recharts**.
- Architected a REST API spanning **6** route modules and **5** Mongoose data models, secured with **JWT** authentication, **bcrypt** password hashing, and per-user middleware-enforced data isolation; deployed a decoupled React/Vite frontend (Vercel) and Node/Express backend (Render).

Cultouria — Sustainable-Tourism Web App — Developer

- Designed and built Cultouria, a type-safe, fully responsive sustainable-tourism web app using **React**, **TypeScript**, **Tailwind CSS**, and **shadcn-ui**, scaffolded with Vite for fast iteration.
- Architected a modular, reusable component system to support the platform's eco-tourism concept — **AI-based itinerary planning**, **AR cultural storytelling**, and **blockchain-secured eco-reward incentives** for artisans, guides, and eco-stay hosts — piloted in Jharkhand.

EXPERIENCE

RD Infro Tech — SDE Intern

Feb 2025 – Apr 2025

- Built a full-stack inventory and sales-management web application (**React**, **Node.js**, **Express.js**, **MongoDB**) for retail businesses over a **2-month** internship, enabling shop owners to track products and monitor daily sales.
- Engineered an **expiry-date tracking** feature that automatically flags items nearing expiration, cutting down manual stock checks and reducing avoidable inventory wastage.
- Built core **product-addition**, **inventory-update**, and **sales-analytics** features, prioritizing usability for non-technical retail staff.
- Tested and debugged the application **end-to-end**, strengthening requirement-analysis and full-stack development skills.

EDUCATION

Jain (Deemed-to-be) University — Bengaluru, Karnataka

B.Tech in Computer Science & Engineering (Software Engineering) | GPA: **9.3/10**

Expected May 2027

Relevant Coursework: Data Structures & Algorithms, Computer Organization & Programming, Software Engineering, Full-Stack Development, Object-Oriented Programming, Database Management Systems, Operating Systems, Game Theory

ACHIEVEMENTS

CodeBrewer (Student Technical Group) — Team Lead

Bengaluru, Karnataka

- Led a student team across multiple **hackathons**, **entrepreneurship fests**, and **technical events**, coordinating end-to-end planning, task delegation, and final presentations under time constraints.
- Department Topper for **3** consecutive years in Computer Science & Engineering (Software Engineering), maintaining a GPA of **9.1–9.3/10**.
- Advanced among **250+** shortlisted teams at Smart India Hackathon and Jain University's Entrepreneurship Week Festival.
- Solved **200+** Data Structures & Algorithms problems across LeetCode, Codeforces and Coding Ninjas, covering DP, graph algorithms, and Union-Find.
